

GALGOTIAS COLLEGE OF ENGINEERING & TECHNOLOGY
GREATER NOIDA
DEPARTMENT OF COMPUTER SCIENCE ENGINEERING

BTECH (SEM V)
ARTIFICIAL INTELLIGENCE (BCAI-501)
UNIT-4 QUESTION BANK

Section A: Short Answer

1. Explain the key components of an intelligent agent's architecture.
2. Discuss the Belief-Desire-Intention (BDI) Architecture.
3. Define Argumentation among multi-agent systems.
4. Discuss the role of trust in agent negotiation.
5. Define intelligent agents and explain their characteristics.
6. Discuss the agent communication, and why is it important in multi-agent systems?
7. Differentiate between reactive agents and deliberative agents.
8. Describe the KQML (Knowledge Query and Manipulation Language) protocol.
9. Discuss various strategies used by agents during negotiation.
10. Discuss the consideration of temporal aspects in the architecture of intelligent agents.
11. Define the decision-making module in the architecture of intelligent agents.

Section B: Long Answer

12. Explain Trust and Reputation in Multi-Agent Systems with examples.
13. Define Intelligent agent. Also explain four classes of agents in architectures for intelligent agents
14. Describe the behaviour of the vacuum cleaner agent based on its precepts, actions, and deduction rules.
15. Compare and contrast reactive agents and deliberative agents.
16. Differentiate between synchronous and asynchronous communication in multi-agent systems.
17. Compare the cooperative negotiation with competitive negotiation.
18. How can cross-domain trust models contribute to more versatile and effective multi agent interactions?
19. Describe a scenario where multiple agents communicate and negotiate to achieve a common goal.
20. Differentiate between negotiation and bargaining in agent communication.
